

Kill germs in a bigger area

How Germitrol works

Air containing lots of germs are irradiated as it passes over the Germitrol Wall Sterilizer by means of natural air movement and/or convection. Harmful germs are killed in this process because they cannot escape the lethal UVC radiation emitted by the wall unit.

Remove harmful airborne viruses, bacteria, mold & VOC's from the air you breathe by using Germitrol Wall Sterilizer.

- Design from the maker of the well-known Germitrol Patented UVC system to kill airborne germs.
- Laboratory test with other Germitrol products have shown a kill rate of 99.99% on bacteria and fungi.
- Tested to be safe from UV rays if used accordingly to the guidelines and recommended usage.
- Safe with no ozone emission.
- Helps to control odours and other gaseous compounds.

Technical Specifications

	38W	48W	78W
Dimensions	530x175x100mm	1000x200x100mm	
Weight	Approx 1.8KG/2.0KG	Approx 2.5KG/3KG	Approx 4KG
Power	Approx 15W/30W	Approx 30W/60W	Approx 75W
Input Voltage	230V		

Places of use

Offices

Hospitals

Laboratories

Kitchens
